

QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full to part sun.
USDA HARDINESS ZONES	Not winter hardy. Will thrive from spring to fall in all zones.
PLANT TYPE	Annual/Edible.
PLANTING DISTANCE IN-GROUND	At least 18 inches apart.
CONTAINER SIZE	One plant per 12-inch or larger container.
MATURE HEIGHT / SPREAD	Eggplant 'Patio Baby': 10 to 24 inches tall with an 18 to 22 inch spread. Pepper 'Giant Ristra F1': 24 inches tall with a 15 to 18 inch spread. Tomato 'Sean's Yellow': 24 to 36 inches tall with an 18 to 22 inch spread.
BLOOM TIME	Mid summer to frost.
TIME TO REACH MATURITY	3 months.

SOIL PREPARATION

We recommend having your soil tested periodically by your local County Extension Office (www.nifa.usda.gov/extension or by calling 1-800-333-4636). A soil test can determine if your soil needs any amendments to enhance the growth and performance of your plants.

Ideal garden soil is easy to dig in and drains well while still holding the nutrients and water vital to plant growth. To prepare a bed for in-ground planting, spade or till the soil to a depth of roughly 12-18 inches. Next, spread a 2-4 inch layer of organic matter such as compost, shredded leaves or peat moss over the soil and mix well.

Thank you for your order!

PLANT WARRANTY

We warrant perennials for 1 year and annuals for 90 days from the time of the original shipment. If for any reason you are dissatisfied, we will replace your plant with a similar or comparable one, at no charge. If your replacement is not available or it is too late in the season to ship, it will reship the following shipping season.

If you have any questions or concerns about your order, please contact us at 888-593-3644 or help@cottagefarmsdirect.com.

Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of a plant that is not expressly grown to be eaten.

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.

OUT OF THE BOX

PATIO PRODUCE COLLECTION

Your plants have been shipped to you in pots. We urge you to remove them from the shipping box and plant them as soon as possible. Should planting be delayed due to weather or other unforeseen circumstances, roll the plastic bag down around each plant and place them near a bright window or other sunny location. Keep them well-watered in their pots until permanently planted. Once planted, they begin setting roots and, as the weather warms, begin showing new growth. Please plant as soon as possible, provide reasonable care and be patient. The foliage on potted plants may appear slightly wilted or yellow upon arrival. This is due to the stress of shipping and is usually nothing to worry about. Water the plant thoroughly, place it in a shady location for a few days and remove any foliage that does not recover.

SHIPPED AS SHOWN

PLANTING INSTRUCTIONS

Important: Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, remove the pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.

PLANTING INSTRUCTIONS (Continued)

4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.
5. Water thoroughly.

Please note: Tomatoes are a rare exception where planting deeply is actually beneficial. Plant the tomato where only 3-5 inches of the stem is above the soil line. Tall tomato plants can be planted on their side in a trench with the tops bent upward. Refill the hole or trench with soil, firming the soil around the plant with your fingers.

CONTINUING CARE

WATERING	<p>Adequate and consistent watering is essential for your plants, especially tomatoes. Inconsistent watering or soils that do not hold water evenly can cause problems with fruit development.</p> <p>Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil or the original root ball to completely dry out. You may need to water as often as every day in periods of drought and extreme summer heat.</p> <p>Overwatering can be as damaging as under watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.</p>
WEEDING	<p>Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.</p>

CONTINUING CARE (Continued)

MULCHING	<p>Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.</p>
FEEDING	<p>To maximize the growth and performance of your plants, feed them with a water soluble fertilizer for fruits and vegetables once every 2 to 3 weeks during the growing season.</p>
HARVESTING	<p>Tomatoes are ready to be harvested once they have changed from green to red. Store freshly picked tomatoes at room temperature and out of direct sunlight. To preserve flavor and texture, avoid refrigerating fresh tomatoes. Do not consume any other part of the plant.</p> <p>Harvest the peppers after the color has changed from green to red. Do not pull the peppers off the plant. Instead, use a knife or pruning shears to make a clean cut and avoid damaging the plant. After harvesting, fresh peppers can be stored in the refrigerator for up to 10 days. Do not consume any other part of the plant.</p> <p>Eggplants are ready to be harvested when they are deep purple with shiny, unwrinkled skin. Cut the stems with hand pruners or a sharp knife, taking care to avoid bruising the fruit. Fresh eggplants can be stored in the refrigerator for several days before using. As with other garden vegetables, do not consume any other part of the plant.</p>
WINTERIZING	<p>These plants are tender annuals that cannot tolerate any frost or freezing temperatures. In the event of a late spring frost, protect young plants by covering them overnight with a sheet, frost blanket or an inverted bucket or box. Remove any material used to cover the plants the following morning. Plants in containers should be moved into a protected area on exceptionally cold nights. The plants should be discarded when they have finished producing at the end of the season.</p>
