

QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE

Indoors: Bright indirect light.
Outdoors: Part shade.

USDA HARDINESS ZONES

Not winter hardy.
Will thrive as a houseplant in all zones.

PLANT TYPE

Annual/Tropical.

CONTAINER SIZE

One plant per 12-inch or larger container.

MATURE HEIGHT/SPREAD

18 to 30 inches tall with a similar spread.

TIME TO REACH MATURITY

12 months.

FACTS OF NOTE

Makes an excellent houseplant.
Great for hanging baskets.
Unique foliage and flowers.

Cottage Farms' Guarantee

We aren't happy if you aren't happy. Cottage Farms warrants its perennials for one year and annuals for 90 days from the time of the shipment. If for any reason you are dissatisfied, Cottage Farms will replace your plant with a similar or comparable one at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following shipping season.

Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of a plant that is not expressly grown to be eaten.

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion, contact a poison control center immediately.

OUT OF THE BOX

HOYA

Your plant has been shipped to you in a pot. Please remove the plant from the packaging right away and plant as soon as possible following the planting instructions below. If it is not possible to plant right away, follow these important steps:

1. Roll the plastic down around the plant and place it in a sunny location.
2. Keep the plant well watered.

Note: Some leaves may appear wilted or yellow upon arrival. This is due to the stress of shipping and is nothing to worry about. Water the plant and let it recover in a shady location for a few days, then gently remove any foliage that does not recover to allow for new growth.

SHIPPED IN A 5.5-INCH POT.
PLANT SIZE MAY VARY BASED ON GROWING CONDITIONS.

FREQUENTLY ASKED QUESTIONS

Where should I place my plant?

Place your plant in a bright, sunny room away from heat sources, air ducts or drafts. A well-ventilated room with a south-facing window is ideal. Place the plant within three feet of a window if possible, and do not allow its leaves to touch the glass.

PLANTING INSTRUCTIONS

We recommend planting your hoya in a container and enjoying it as a houseplant. Use the following instructions as a guide for container planting.

Important: Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

- A** Fill the container with soil to within 4 inches of the top. Remove the pot and prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork or gardening tool and pruning any damaged roots. Dig a hole in the soil to insert the lower part of the root ball.
- B** Once the plant is properly positioned in the pot, begin filling the pot with soil. Work the soil around the root ball with your hands, firming the soil around the plant with your fingers. When the hole is filled, tamp the soil to remove any air pockets.
- C** Water well and, if necessary, adjust the plant so it is upright and add additional soil if needed. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.

CONTINUING CARE

- RE-POTTING** Hoya should be re-potted when its roots become crowded or begin circling the inside of the pot. Repot the plant into a slightly larger container and replace its growing medium with fresh potting soil.
- PRUNING** Remove dead, damaged or unsightly growth as needed to maintain an attractive appearance. When pruning your plant, always make a clean cut with sharp scissors or pruning shears to avoid damaging its leaves and stems.

CONTINUING CARE (Continued)

WATERING

Hoya performs best when the top inch of soil is allowed to dry out between waterings. Watering once per week is usually sufficient. Water thoroughly with room temperature water until the soil is well-saturated and water drains from the holes at the bottom of the pot. If you choose to keep a saucer beneath the pot, empty excess water from the saucer within an hour of watering. In areas with hard tap water or softened water, consider watering with distilled water or collected rainwater to prevent salts from building up in the soil.

Provide humidity for your plant by misting it with a spray bottle each morning or by using a pebble tray. Create a pebble tray by placing a shallow tray filled with pebbles and water beneath the plant. Keep the water level slightly below the pebbles so the pot is not submerged in water. As the water evaporates, it will provide humidity for your plant. An automatic room humidifier can also be used to boost the humidity level around your plant.

FEEDING

Feed your plant once every 2-3 weeks during the growing season with a water-soluble fertilizer such as NPK+ Fertilizer Pods (SKU #M133417). Discontinue fertilizing by September 1st to allow your plant to prepare for winter. Resume fertilizing when new growth begins in spring.

GROWING INDOORS

Hoya makes an excellent year-round houseplant. Keep your plant in a sunny room, preferably one with a south-facing window, where the temperature stays between 65-80°F. Wipe its leaves with a damp cloth periodically to prevent dust build-up. Give the pot a quarter turn each week to ensure even growth and prevent its stems from stretching toward a window or light source.

GROWING OUTDOORS

Though typically grown indoors, hoya can be enjoyed outdoors in a protected area during the warm months if desired. Move the plant back indoors before the temperature drops below 50°F.
